Fall 2020

Some Etymology...

Definition (Linearity: Wikipedia)

The property of a mathematical relationship (function) that can be graphically represented as a straight line.

Definition (Algebra: Wikipedia)

The study of mathematical symbols and the rules for manipulating these symbols.

- ▶ Linear algebra is the study of *manipulating* letters/symbols which are used to represent linear transformations.
- ► Two types of manipulation....

Type 1: Linear Transformations as Letters

Definition (Linear Transformation)

A function $L: \mathbb{R}^m \to \mathbb{R}^n$ is linear if

- 1. for all $v \in \mathbb{R}^m$ and all $\alpha \in \mathbb{R}$ we have $L(\alpha v) = \alpha L(v)$ and
- 2. for all $v, w \in \mathbb{R}^m$ we have L(v + w) = L(v) + L(w).
- \blacktriangleright Our linear transformation here is represented by the *letter L*.
- \blacktriangleright We will examine the rules behind manipulating L from an algebraic perspective, such as...
 - ► Associative? Commutative?
 - ► Invertible?
 - ► Derivatives? (Homework 9)

Type 2: Linear Transformations as Matrices

Theorem (Matrix Representation Theorem)

All linear transformations represent matrices; all matrices represent linear transformations.

- ▶ Important, but boring theorem.
- ▶ Linear transformations can also be represented by matrices

$$L = \begin{bmatrix} L_{1,1} & \dots & L_{1,n} \\ \vdots & \ddots & \vdots \\ L_{m,1} & \dots & L_{m,n} \end{bmatrix}$$

- ▶ We will also examine the *mechanical* perspective of linear transformations, such as...
 - ► How to actually multiply?
 - ► Interpretation of multiplication
 - ▶ Using matrix multiplication simply for calculations. (Removing the notion of a transformation)
 - ➤ (!) Think about which framework to use in your proofs!

A Note about Gaussian Elimination

- ► Gaussian Elimination is a procedure to calculate the solutions of a matrix equation.
- ▶ Not covered in this course, but you should be familiar with it.
- ▶ If this is the first time you've heard this, then please do some light studying to familiarize yourself with the process.
- ▶ Just know this at the high school/undergrad level
- ▶ If you've already studied it in previous courses, that should be enough.

Questions 1: Linear Transformations

Which of the following functions are linear? If the function is linear, what is the kernel?

- 1. $f_1: \mathbb{R}^2 \to \mathbb{R}^2$ such that $f_1(a,b) = (2a, a+b)$
- 2. $f_2: \mathbb{R}^2 \to \mathbb{R}^3$ such that $f_2(a, b) = (a + b, 2a + 2b, 0)$
- 3. $f_3: \mathbb{R}^2 \to \mathbb{R}^3$ such that $f_3(a, b) = (2a, a + b, 1)$
- 4. $f_4: \mathbb{R}^2 \to \mathbb{R}$ such that $f_4(a,b) = \sqrt{a^2 + b^2}$
- 5. $f_5: \mathbb{R} \to \mathbb{R}$ such that $f_5(x) = 5x + 3$

Solutions 1: Linear Transformations

Which of the following functions are linear? If the function is linear, what is the kernel?

- 1. $f_1: \mathbb{R}^2 \to \mathbb{R}^2$ such that $f_1(a, b) = (2a, a + b)$
- 2. $f_2: \mathbb{R}^2 \to \mathbb{R}^3$ such that $f_2(a,b) = (a+b, 2a+2b, 0)$
- 3. $f_3: \mathbb{R}^2 \to \mathbb{R}^3$ such that $f_3(a,b) = (2a, a+b, 1)$
- 4. $f_4: \mathbb{R}^2 \to \mathbb{R}$ such that $f_4(a,b) = \sqrt{a^2 + b^2}$
- 5. $f_5: \mathbb{R} \to \mathbb{R}$ such that $f_5(x) = 5x + 3$

Solution

- 1. Linear, Kernel is $\{0\}$.
- 2. Linear, Kernel is $\{(c, -c) : c \in \mathbb{R}\}$.
- 3. Not linear, $f_3(0,0) = (0,0,1)$.
- 4. Not linear, $f_4(1,0) + f_4(0,1) = 2$ and $f_4(1,1) = \sqrt{2}$.
- 5. Not linear, $f_5(0) = 3$.

Matrix Notation

▶ A linear transformation $T : \mathbb{R}^n \to \mathbb{R}^m$ is represented by a $m \times n$ matrix which is an element of $\mathbb{R}^{m \times n}$. (!! Note the order !!)

$$T = m \begin{pmatrix} T_{1,1} & \dots & T_{1,n} \\ \vdots & \ddots & \vdots \\ T_{m,1} & \dots & T_{m,n} \end{pmatrix}$$

- \blacktriangleright This matrix has m rows and n columns.
- $ightharpoonup T_{i,j}$ represents the entry in the *i*th row and *j*th column.

- ▶ Next few slides go over "Inner Product Method" of matrix multiplication.
 - ► (This is a term I made up....)
 - ▶ We haven't covered inner products yet
- ► Each entry of the resultant matrix is an inner product of a row of the first matrix and a column of the second matrix
- ightharpoonup This is the *exact* definition of matrix multiplication.
- ▶ Most straightforward way to calculate a matrix product

Let $A \in \mathbb{R}^{n \times k}$, $B \in \mathbb{R}^{k \times m}$

Rows of first matrix "line up" with columns of the second matrix.

```
\begin{bmatrix} a_{1,1} & \dots & a_{1,k} \\ a_{2,1} & \dots & a_{2,k} \\ \vdots & \dots & \vdots \\ a_{n-1,1} & \dots & a_{n-1,k} \\ a_{n,1} & \dots & a_{n,k} \end{bmatrix} \begin{bmatrix} b_{1,1} & b_{1,2} & \dots & b_{1,m-1} & b_{1,m} \\ \vdots & \vdots & \dots & \vdots & \vdots \\ b_{k,1} & b_{k,2} & \dots & b_{k,m-1} & b_{k,m} \end{bmatrix}
= \begin{bmatrix} \sum_{i=0}^{k} a_{1,i}b_{i,1} & \dots & \dots & \dots & \dots \\ \sum_{i=0}^{k} a_{2,i}b_{i,1} & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots & \dots & \dots \\ \sum_{i=0}^{k} a_{n-1,i}b_{i,1} & \dots & \dots & \dots & \dots \\ \sum_{i=0}^{k} a_{n,i}b_{i,1} & \dots & \dots & \dots & \dots \end{bmatrix}
```

Let $A \in \mathbb{R}^{n \times k}$, $B \in \mathbb{R}^{k \times m}$

Rows of first matrix "line up" with columns of the second matrix.

```
\begin{bmatrix} a_{1,1} & \dots & a_{1,k} \\ a_{2,1} & \dots & a_{2,k} \\ \vdots & \dots & \vdots \\ a_{n-1,1} & \dots & a_{n-1,k} \\ a_{n,1} & \dots & a_{n,k} \end{bmatrix} \begin{bmatrix} b_{1,1} & b_{1,2} & \dots & b_{1,m-1} & b_{1,m} \\ \vdots & \vdots & \dots & \vdots & \vdots \\ b_{k,1} & b_{k,2} & \dots & b_{k,m-1} & b_{k,m} \end{bmatrix}
= \begin{bmatrix} \dots & \sum_{i=0}^{k} a_{1,i}b_{i,2} & \dots & \vdots & \vdots \\ \vdots & \vdots & \dots & \vdots & \vdots & \vdots \\ \vdots & \vdots & \dots & \vdots & \vdots & \vdots \\ \vdots & \vdots & \dots & \vdots & \vdots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \ddots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \vdots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \vdots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots & \dots \\ \vdots & \dots & \dots & \dots
```

Let $A \in \mathbb{R}^{n \times k}$, $B \in \mathbb{R}^{k \times m}$

Rows of first matrix "line up" with columns of the second matrix.

Rows of first matrix "line up" with columns of the
$$\begin{bmatrix} a_{1,1} & \dots & a_{1,k} \\ a_{2,1} & \dots & a_{2,k} \\ \vdots & \dots & \vdots \\ a_{n-1,1} & \dots & a_{n-1,k} \\ a_{n,1} & \dots & a_{n,k} \end{bmatrix} \begin{bmatrix} b_{1,1} & b_{1,2} & \dots & b_{1,m-1} & b_{1,m} \\ \vdots & \vdots & \dots & \vdots & \vdots \\ b_{k,1} & b_{k,2} & \dots & b_{k,m-1} & b_{k,m} \end{bmatrix}$$

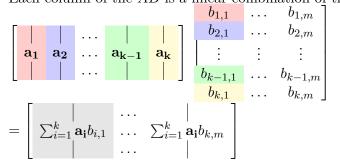

$$= \begin{bmatrix} \dots & \dots & \sum_{i=0}^{k} a_{1,i}b_{i,m} \\ \dots & \dots & \sum_{i=0}^{k} a_{n-1,i}b_{i,m} \\ \dots & \dots & \sum_{i=0}^{k} a_{n-1,i}b_{i,m} \end{bmatrix}$$

$$This is the exact definition of matrix multiple and the ex$$

- ▶ This is the *exact* definition of matrix multiplication.
- ► Most straightforward way to calculate a matrix product

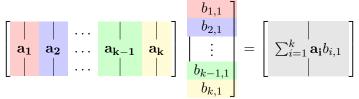

- ▶ Next few slides go over "Linear Combination of Columns" method of matrix multiplication.
 - ▶ (Also a term I made up....heh...)
 - ▶ We have covered linear combinations :)
- ► Each column of the result is a linear combination of the columns of the first matrix.
- ► Much more interpretable!
- ▶ (!) Keep an eye out for this
- ► Less straightforward way of calculating

Each column of the AB is a linear combination of the columns of A.

Each column of the AB is a linear combination of the columns of A.

One dimensional case (for B):

- ▶ Result is in the span of columns of A!
- ▶ Much more interpretable!
- ▶ (!) Keep an eye out for this, especially if columns of A have meaning.

Questions 2: Matrix Manipulation

Let
$$A = \begin{bmatrix} 5 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix} B = \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 3 \\ 0 & 0 & 1 & 4 \end{bmatrix} C = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 2 & 1 & 0 & 0 \\ 1 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \end{bmatrix}$$

- 1. Calculate AB
- 2. Calculate BC
- 3. What does A do to B?
- 4. What does C do to B?
- 5. Can you find an x s.t $Cx = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$?

Solutions 2: Matrix Manipulation

Solution

1.
$$AB = \begin{bmatrix} 5 & 0 & 0 & 10 \\ 0 & 0 & 1 & 4 \\ 0 & 1 & 0 & 3 \end{bmatrix}$$
2. $BC = \begin{bmatrix} 0 & 0 & 2 & 0 \\ 2 & 1 & 3 & 0 \\ 1 & 0 & 4 & 1 \end{bmatrix}$

- 3. Five times first row, switch second and third row
- 4. First column becomes twice the second column plus one times third column, second column stays the same, switch 3rd and fourth columns.
- 5. No, $\begin{bmatrix} 1\\1\\1\\1 \end{bmatrix}$ is not in the span of the columns of C

Linear Transformations and Subspaces

- ▶ Linear transformations are fundamentally connected to subspaces.
- ▶ We will spend a lot of time on investigating the *action* of a linear transformation *from* subspaces, and *to* subspaces
- ► Key questions in linear algebra:
 - ▶ What does a linear transformation do to 1-dimensional (and by linearity) n-dimensional subspaces?
 - ▶ What are "nice" combinations of 1-dimensional subspaces?
 - ▶ How do linear transformations cut up vector spaces?
 - ► For a given linear transformation, are there certain, *special* subspaces? (Lec 6,7)

Questions 3: Invertibility

Let $S \in \mathbb{R}^{n \times n}$, $T \in \mathbb{R}^{n \times k}$ and $U \in \mathbb{R}^{k \times k}$.

Let S and U be invertible.

1. Prove that $Ker(S) = \{0\}.$

Now, prove or give a counter example to the following statements:

- $2. \ Ker(T) = Ker(TU)$
- 3. Ker(ST) = Ker(T)

Solutions 3: Invertibility

Let $S \in \mathbb{R}^{n \times n}$, $T \in \mathbb{R}^{n \times k}$ and $U \in \mathbb{R}^{k \times k}$.

Let S and U be invertible.

1. Prove that $Ker(S) = \{0\}.$

Solution

We prove by contradiction.

Suppose that $Ker(S) \neq 0$. Then $\exists x \neq 0 \text{ s.t } Sx = 0$.

Now, consider $S^{-1}Sx$.

$$(S^{-1}S)x = Ix = x,$$

and $S^{-1}(Sx) = 0.$

 $ana\ S^{-1}(Sx) = 0.$ We have reached a contradiction, so Ker(S) = 0

Solutions 3: Invertibility

Solution

2.
$$Ker(T) = Ker(TU)$$
. $False$

$$Consider T = \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} U = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$$

$$Ker(T) = \{ \begin{bmatrix} 0 \\ y \end{bmatrix} \mid y \in \mathbb{R} \}.$$

$$Ker(TU) = \{ \begin{bmatrix} x \\ 0 \end{bmatrix} \mid x \in \mathbb{R} \}$$
3. $Ker(ST) = Ker(T)$. $True$

$$We'll show that $Ker(ST) \subset Ker(T)$.
$$Let \ x \in Ker(ST).$$
So, $STx = 0$.
$$Since \ S \ is invertible, then \ Ker(S) = 0.$$$$

Therefore, Tx = 0, and $x \in Ker(T)$. $Ker(T) \subset Ker(ST)$ is straightforward.

Question 4: Kernel and Image

1. Let $T \in \mathbb{R}^{n \times n}$. Show that:

$$Ker(T) \cap Im(T) = \{0\} \iff \text{If } T^2v = 0, \text{ then } Tv = 0$$

Solution 4: Kernel and Image

1. Let $T \in \mathbb{R}^{n \times n}$. Show that:

$$Ker(T) \cap Im(T) = \{0\} \iff \text{If } T^2v = 0, \text{ then } Tv = 0$$

Solution

$$(\Longrightarrow)$$

Assume that $Ker(T) \cap Im(T) = \{0\}.$

Assume that $T^2v = 0$. We will show that Tv = 0

Since $T^2v = 0$, then T(Tv) = 0, so $Tv \in Ker(T)$.

Now, by definition, $Tv \in Im(T)$, so $Tv \in Ker(T) \cap Im(T)$, and Tv = 0 (\iff)

Assume that $T^2v = 0 \implies Tv = 0$

Let $y \in Ker(T)$, and $y \in Im(T)$. We show that y = 0.

Since $y \in Ker(T)$, then Ty = 0.

Since $y \in Im(T)$, then $\exists x \ s.t \ Tx = y$.

Then $0 = Ty = T(Tx) = T^2x$. Since $T^2x = 0$, then Tx = 0. So

y = Tx = 0.
